
add a button in tinymce/JCE editor for geshi tags

Posted by shoulders - 2008/12/19 10:55

I know this might not be your area but i will give it a try. Is there a tutorial or an easy way to add a custom button to tinymce or JCE editor to add your geshibot tags. this would be an excellent addition.

thanks

shoulders

The readmore button is a good example.

/plugins/editors-xttd/

Thanks for this, i am not a programmer but will look into it. It will give me something to do. lol

I assume i can just edit this button and then upload the changed files to the folder you mentioned. I did not even think about the buttons at the bottom of the editor, the joomla ones. This means the buttons when setup will work cross editor.

I have looked at easytemplate. this is a plugin that adds one button on to the bottom of the editor and allows you to pick from multiple snippets you have installed.

http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,4301/Itemid,35/

it will do just for now.

cheers
