
PHP Module FAQs

Posted by admin - 2008/07/06 00:07

Where can I get the PHP Module for Joomla?

Visit the [PHP Module Project Page](#) for download details.

What does the PHP Module do?

It allows you to place any PHP, HTML, JavaScript and CSS code in a module position. It is based on the HTML Module, with the added benefit of allowing PHP.

Do I have to wrap the PHP code in special tags?

No, you can use the regular PHP tags directly. eg:

Can I use predefined Joomla variables?

Yes, but you first have to declare them as globals. eg:

Can I include PHP files?

Yes, but make sure you use the full path to the PHP files. It's just easier.

Example: Joomla 1.0

Example: Joomla 1.5

```
include(JPATH_ROOT.'/modules/mod_php/includes/my_php_file.php');
```

Can I use more than one Joomla PHP Module on a page?

Yes, just copy the module using the built in Joomla Module Copy feature.
