
Displaying modules conditionally?

Posted by icesar - 2009/03/27 15:31

Hello! Thanks for your great module, I'm using the latest version with Joomla 1.5 and a custom template.

I'm trying to display either a contact form if a user is logged in OR a login form if he's not, using the PHP module. It works for the login form, but the contact form can't seem to access the database correctly. Here's what I have so far:

And the errors that I get are:

Notice: Undefined offset: 0 in C:\wamp\www\aec\modules\mod_chronocontact\helper.php on line 17

Notice: Trying to get property of non-object in C:\wamp\www\aec\modules\mod_chronocontact\helper.php on line 17

Notice: Undefined property: stdClass::\$imagever in C:\wamp\www\aec\modules\mod_chronocontact\helper.php on line 19

Notice: Undefined offset: 0 in C:\wamp\www\aec\modules\mod_chronocontact\helper.php on line 24

Notice: Trying to get property of non-object in C:\wamp\www\aec\modules\mod_chronocontact\helper.php on line 24
There is no form with this name or may be the form is unpublished, Please check the form and the url and the form management

Basically, the code fails when it tries to access rows after a query. Do you have any idea what might be going on?

Does mod_chronocontact work outside mod_php? You can't tell here if its how you invoked the module, or the code in the module itself that is to blame.

Hello -- yes, mod_chronocontact is working fine otherwise. It only seems to break down inside mod_php. The form that I am trying to embed can be used fine when loaded in the component area.
