
Creating whole page columned menu

Posted by rdonato - 2009/05/16 09:33

Greetings,

I downloaded and installed the html module to try and create a frontpage like this:

<http://stacymapel.com/documents/>

I now need to link each menu item to joomla articles as well as images. I don't know if this is possible with html module or its original intention.

Any suggestions or help would be greatly appreciated.

Thanks

=====

You can definitely link to Joomla articles from the HTML module.

eg:

Article 1

Gabe.
