
Example Code for PHP Content Plugin for Joomla 1.0

Posted by admin - 2008/07/06 00:34

The content plugin allows you to manipulate Joomla's article content before they are displayed.

When in a content plugin in Joomla, the article is represented by the object \$row in Joomla 1.0. This \$row is the result of a database query for the article, and thus contains the article title in \$row->title, the article text in \$row->text etc.

To modify the text of an article in Joomla 1.0 we have to modify \$row->text.

Example:

We want to add a horizontal line after every article. A horizontal line is

That's it. Notice the dot before the = sign. (.=). This appends to the string.

Replace all occurrences of {adsense} with a Google AdSense Ad.

```
$adsense = '
```

```
','  
;  
  
if (isset($row->text)) {  
    $row->text = str_replace('{adsense}', $adsense, $row->text);  
}
```

Hello All!

Can you answer me where I can get this mambot for Joomla 1.0.15? There is only for Joomla 1.5 on this page
<http://code.google.com/p/joomla-php/downloads/list> :(
